---

## PROFESSIONAL SUMMARY

---

Backend-focused full stack developer with hands-on experience designing, building, and deploying production-style web systems. Experienced with Node.js, Express.js, MongoDB, REST APIs, authentication, role-based access control, WebSockets, Docker, and cloud integrations. Built standalone backend APIs and full stack applications involving hotel management, real-time communication, interview preparation, appointment booking, and e-commerce-style experiences.

## TECHNICAL SKILLS

---

**Backend:** Node.js, Express.js, REST API Design, Socket.IO, Service-Layer Architecture

**Databases:** MongoDB, Mongoose ODM, MySQL, PostgreSQL, Prisma

**Authentication & Security:** JWT, bcrypt, Role-Based Access Control (RBAC), Email OTP Verification, httpOnly Cookies

**Frontend:** React.js, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3

**Cloud, DevOps & Testing:** Docker, Git, GitHub, Render, Vercel, Cloudinary, Jest, k6 (load testing), Redis (familiar)

**Development Practices:** Responsive Design, Mobile-First Development, Component Architecture

## SELECTED BACKEND PROJECTS

---

### Hotel System Management API

Node.js / Express / MongoDB • 2025 | [Live Demo](#) | [GitHub](#)

- Modeled a complete hotel operations workflow covering room search and booking, automatic date-overlap checking, booking-linked payments, receptionist check-in, and admin management of rooms and issues.
- Implemented role-based access control across three user roles (guests, receptionists, administrators), each with its own permissions and workflows.
- Re-architected the system from Prisma/PostgreSQL to MongoDB/Mongoose, redesigning relational logic such as double-booking prevention as document-based queries.

### Real-Time Chat Backend API

Node.js / Express / Socket.IO / MongoDB / Docker / Cloudinary • 2025 | [Live Demo](#) | [GitHub](#)

- Built a real-time chat engine supporting concurrent connected users in one-to-one and multi-user group rooms, with OTP-verified registration, JWT authentication via httpOnly cookies, typing indicators, online/offline presence, and file sharing.
- Authenticated WebSocket connections at the handshake, fixed production issues (dynamic ports, CORS, null values), and containerized the service with Docker.

### Interview Prep Question API

Node.js / Express / MongoDB • 2025 | [Live Demo](#) | [GitHub](#)

- Designed a structured interview-question backend with full CRUD operations and multi-criteria filtering by topic and difficulty.
- Implemented OTP-verified authentication, JWT via httpOnly cookies, and role-based access with admin-only editing.
- Separated authorization logic from business logic to improve clarity and maintainability.
- Debugged deployment failures caused by an undeclared dependency and a gitignored import.

## SELECTED FULL STACK & FRONTEND PROJECTS

---

### LuxLab — Luxury Barbershop Platform

React / Node.js / Express / MongoDB / JWT / Cloudinary • 2025 | [GitHub](#)

- Built a complete salon booking web app with separate Admin and User dashboards; admins upload hairstyle images with name and pricing, and users browse the gallery and book appointments.
- Built the full backend (REST routes, MongoDB models, auth middleware, protected endpoints) with JWT and role-based access, Cloudinary uploads, and an appointment approval workflow with email notifications.

### Africana Swallow — African Food Restaurant

HTML / CSS / JavaScript / Node.js / Express / MongoDB • 2025 | [Live Demo](#) | [GitHub](#)

- Built a full stack restaurant website with an interactive menu and ordering experience in pure JavaScript, with MongoDB persistence and a backend deployed live on Render.

### AgroTech — Farm Produce Delivery

React.js / CSS • 2025 | [Live Demo](#) | [GitHub](#)

- Rebuilt a vanilla HTML/CSS/JavaScript project in React to demonstrate component-based architecture and state management, connecting consumers directly with local farmers for fresh produce delivery.

### Music Catalog — Streaming UI

React.js / CSS • 2025 | [Live Demo](#) | [GitHub](#)

- Rebuilt a vanilla JavaScript music streaming interface in React with reusable components for artist browsing, a song catalog, and a streaming experience.

## EDUCATION & LEARNING

---

### Self-Taught Full Stack Developer | 2025 – Present

Independently learned frontend (HTML, CSS, JavaScript, React), backend (Node.js, Express, MongoDB, Docker) by building and deploying real projects.
